

There are two kinds of pilot whales:
short-finned and long-finned, but
neither one knows how to fly an airplane!

PILOT WHALE

How long can you hold your breath?
While most humans can only do
it for about 2 minutes,
a pilot whale can hold
its breath for
15 minutes!

A group of whales is called a pod.
Isn't that whale-y cool?

Smile! Pilot whales have 28-36 teeth.
